PROFILE

Detail-oriented and highly motivated Python and Django Developer with a strong foundation in web development, database management, and SQL. Proven ability to leverage technical skills and expertise in Django, Python, HTML, and, CSS to create robust web applications and optimize database performance using SQL. Eager to contribute to a dynamic team and grow professionally in a challenging environment.

WORK EXPERIENCE

Oasis Infobyte

Python developer Intern

- Built a real-time chat application using threading and socket modules.
- Developed a BMI calculator with user input validation and health insights.
- Created a secure password generator using advanced randomization techniques.

Odisha Computer Application Centre

python intern

- Led a team to develop a calculator application using Python's Tkinter module, enhancing GUI design and functionality.
- Managed SQL databases for data storage and retrieval, ensuring efficient and accurate data handling.

PROJECT

Login page for a web application

- Developed a fully functional login page for a web application using Django and Bootstrap.
- Utilized Django's authentication framework to handle user authentication, ensuring secure login processes.
- Enhanced the web application's security by implementing a robust user authentication system.

Tweet web application

- Developed a tweet web application using Django, where only authenticated users can add, delete, and edit tweets.
- Configured URL routing by defining paths in the urls.py file to direct traffic to the appropriate views for adding, deleting, and editing tweets.
- Enhanced the web application's functionality by allowing only authenticated users to manage tweets, ensuring data integrity and security.
